

ABSTRACT OF THE DISCLOSURE

Disclosed is a remote operating system in which even if a remote-operated apparatus is connected to a network protected by a firewall and a remote-operating

5 apparatus exists outside of the firewall, it is
possible for the remote-operating apparatus to remotely
operate the remote-operated apparatus by transmitting
information containing an operation designation as a
response to a command, such as a stream connection
10 request, transmitted from the remote-operated
apparatus.
